

homogenizer gauges DS 4" (100mm)

These instruments are designed for homogenizer machines and are built according to standard n. 74-06 of 3-A organization (Sanitary Standards Symbol Administrative Council). The absence of interstices and the mirror finishing of the components assure the best hygiene level. The process connection is a special diaphragm seal which is an integral component of the pressure gauge. To reduce the effects of severe operating conditions like vibrations and pulsations, the instruments can be liquid filled. These types of sensors are intended for Manual (COP) Cleaning.
