

## 4/2 and 4/3-way Directional Valves Pilot Operated Model 4 WEH... Externally Pilot Operated Model 4 WH ...

Sizes 10 to 32

Series 4X, 6X, 7X

Maximum pressure up to 5076 PSI (350 bar)

Maximum volume up to 290.6 GPM (1100 L/min)

### Features

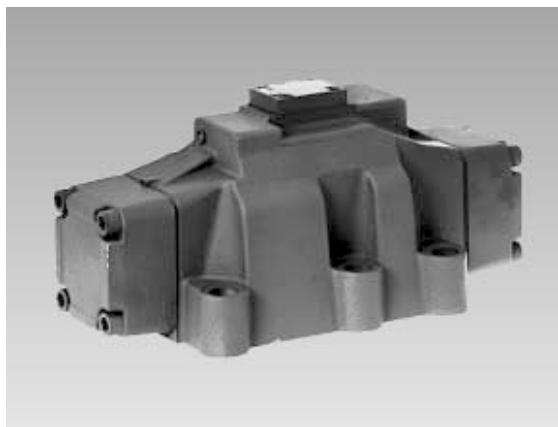

- Solenoid pilot operated directional valves (WEH)
- Hydraulic pilot operated directional valves (WH)
- Mounts on standard ISO 4401-**5, 7, 8 or 10**, NFPA T 3.5.1 M R1 and ANSI B 93.7 **D 05, D 07, D 08 or D10** interfaces
- For subplates, see data sheets RA 45 045 ... RA 45 060, may be ordered separately
- 3-position spring centered (sizes 10 to 32)
- 3-position spring or hydraulic centering (sizes 16, 25 and 32)
- 2-position hydraulic or spring offset (sizes 10 to 32)
- Wet pin AC or DC solenoids as required
- Manual overrides standard (WEH)
- Individual solenoid plug-in connectors or central wiring box, see datasheet RA 08 006
- Optional meter-in or meter-out pilot choke option
- Optional stroke limiter and/or spool position indicator upon request (Size 16 or 32), see data sheet RA 24 830
- Optional inductive limit switches to monitor main spool position, upon request, see data sheet RA 24 830
- "P" port pilot pressure insert (sizes 16 to 32), for open center spools

## Pilot oil supply

### 4WEH...

All Rexroth solenoid pilot operated directional valves are field convertible from external to internal pilot or drain. This requires removing or replacing internal plugs as shown in sectional views on this page. For plug location within the sectional views, please refer to the appropriate installation drawing. Since the method of piloting is designated by model code, nameplates should be corrected when conversions are made.

### 4WEH/... (no designation = external pilot and external drain)

This model is externally piloted via port "X" and externally drained via port "Y". All internal plugs (10), (11) are installed.

### 4WEH/...E (E = internal pilot and external drain)

Pilot fluid is supplied internally from "P", while externally drained through port "Y". Port "X" in the subplate must be plugged. To convert valve Model 4WEH 16..., the port "X" side end cap must be removed. Spool (see section c-c) with O-ring seal is removed and rotated around the vertical axis. The valve is re-assembled by re-installing the spool and replacing the end cap. Torque on bolts  $t = 27 \text{ lb-ft}$  (37 Nm).

### 4WEH/...T (T = external pilot and internal drain)

This model is externally piloted through port "X" and internally drained to port "T". Port "Y" in the subplate must be plugged.

### 4WEH/...ET (ET = internal pilot and internal drain)

On this model, pilot fluid supply is internal from port "P" and the drain is internal through port "T". Both ports "X" and "Y" in the subplate are plugged.

**1** Plug M6 DIN 906-8.8, 3 A/F – pilot oil drain

**2** Plug M6 DIN 906-8.8, 3 A/F – pilot oil supply

**3** Plug M8 x 1 DIN 906-8.8, 4 A/F – for external sealing

#### Tightening torques $M_A$ for cover mounting bolts:

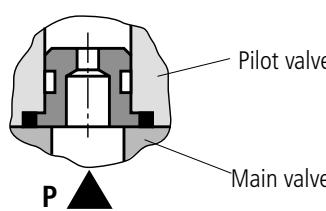

**Size 16:** 35.8 lb-ft (35 Nm) **Size 25:** 50.2 lb-ft (68 Nm)

#### Tightening torque $M_A$ for pilot valve mounting bolts:

**Sizes 10 to 32:** 6.64 lb-ft (9 Nm)

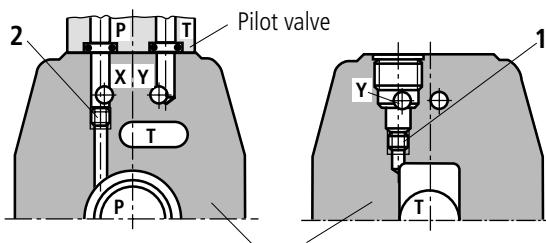

#### Pilot orifice insert (option B08, B10, B12, B15)

To limit maximum flow, orifice inserts are optionally available. Primarily, the orifice insert is intended to prevent flow rates in excess of the maximum performance data of the pilot valve (see page 9). For this purpose the insert is installed in the "P" port however, will fit any of the ports, allowing for design flexibility.

## Functional description, section

### Directional Controls Model 4WEH

Directional valves Model 4WEH... are solenoid pilot operated spool type valves. In the standard version, 3-position spools are spring centered, while 2-position spools are hydraulically offset. A spring offset two-position, and hydraulically centered three-position, option is also available for most sizes. Directional control valves control the start, stop and direction of fluid flow.

### 3-Position Valves, Example 4WEH 22 E-7X/6...

In spring centered versions, the pilot valve vents both chambers (6) to tank in center position. This allows return springs (3.1, 3.2) to center spool (2) with respect to housing (1). Pilot valve (4) is supplied via passage (7), either internally from main port "P" or externally through pilot port "X". When a solenoid is energized, one of the two end caps (6) is pressurized, while the other is drained to tank. Main spool (2) moves to a shifted position, (flow pattern "P" to "A" and "B" to "T" or "P" to "B" and "A" to "T"), depending on which solenoid (5) is energized. Please refer to symbols on page 6, 7, and 8 for exact flow patterns/solenoid relationships. Pilot valve (4) can be internally drained through main port "T" or externally drained through pilot port "Y". Manual overrides are provided to operate the valve without electrically energizing the solenoid.

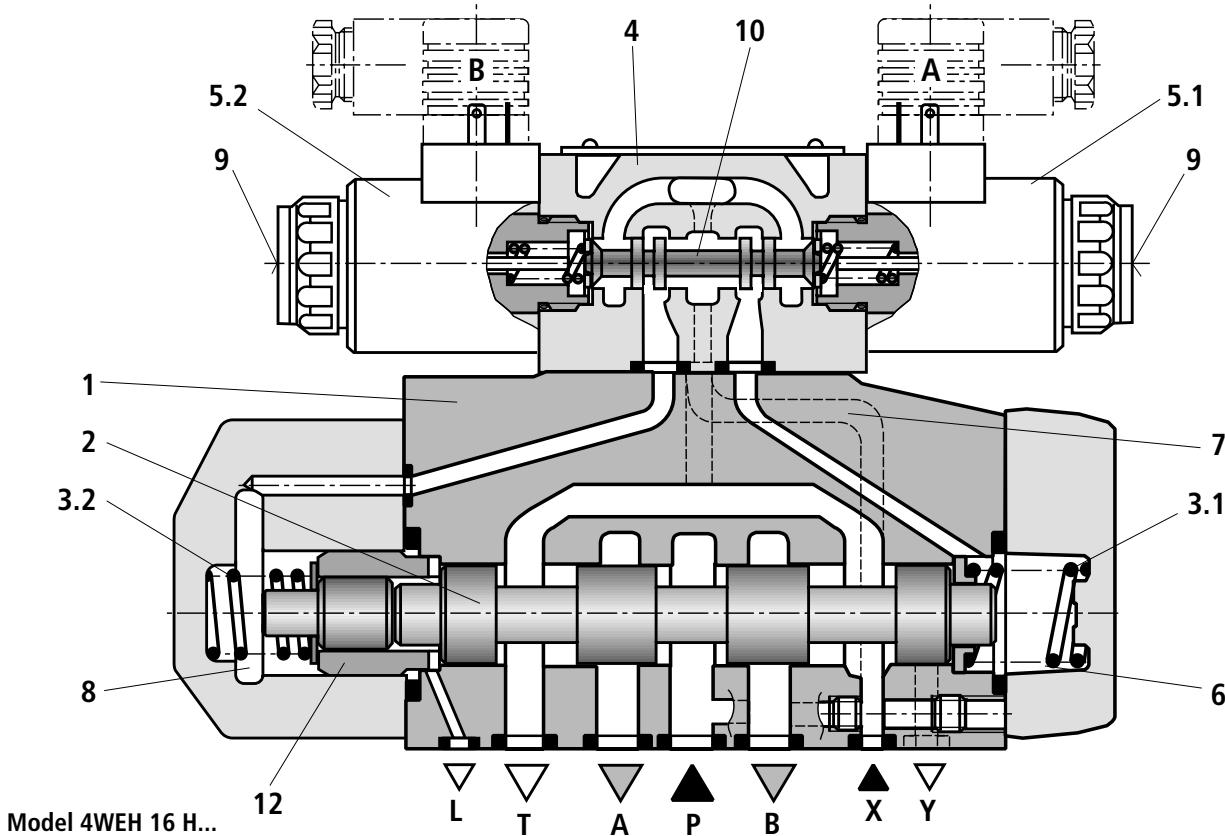

For three-position valves (except sizes 10 and 22), a hydraulic centered option is available (not shown). In this model, hydraulic centering requires both end cap chambers (6) be pressurized in the non-energized condition. An "L" drain port (not shown) is provided through the main valve interface.

### 2-Position Valves, Example 4WEH 22C7X/6...

In this model, the main spool (2) is normally hydraulically offset by a 2-position pilot valve (4). The end cap chambers (6) are supplied without springs (3.1, 3.2). The pilot valve may be a 2-position, single solenoid (spool type "D"); 2-position, double solenoid (spool type "D/O"); or double solenoid with detent (spool type "D/OF"). Please refer to data sheet RA 23 178 for additional information on the pilot valve. A spring offset, 2-position main spool (not shown) is also available. This option assures the position of the main spool (2) during start-up and is particularly intended to be used with externally piloted systems, where the main pumps are started before the pilot oil supply system.

### Directional Controls Model 4WH...

Directional control valves Model 4WH... are identical to Model 4WEH... except that the solenoid operated pilot valve (4) is replaced by a cover plate (10). The cover plate connects pilot port "X" to chamber (6) on the "A" port side and pilot port "Y" to chamber "6" on the "B" port side. Pilot pressure on port "X" provides shifted position "a", while pilot pressure on port "Y" provides shifted position "b". During system design, please consider the following: To achieve center position, the spring centered version requires venting both end cap chambers (6). The pressure centered version requires pressurization of both end cap chambers (6); and two-position hydraulically offset versions, spool (2) position can only be assured by maintaining a pilot pressure on either "X" or port "Y".

**Functional description, section****4/3-way directional valve with pressure centering of the main control spool, model 4WEH...H**

The main control spool (2) in the main valve is held in the neutral position by pressurization of the two front faces. A centering sleeve (12) is supported in the housing and holds the spool in position.

By removing the pressure from one of the spool ends, the main control spool (2) is moved to the shifted position.

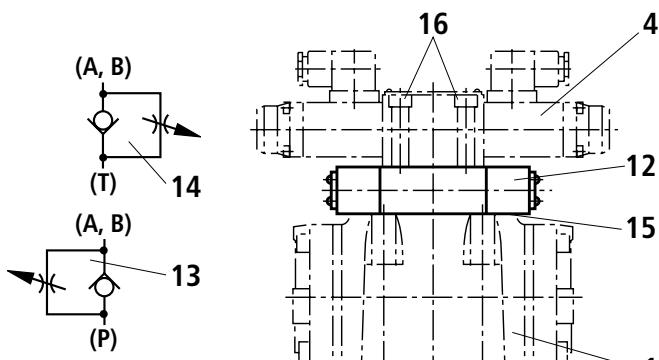

The unloaded spool area displaces the returning pilot oil via the pilot valve into the Y channel (external).

## Shifting time adjustment, pressure reducing valve, pre-load valve

### Pilot choke adjustment (option S or S2)

The shifting time of the main valve (1) can be adjusted by using a sandwich mounted throttle valve with reverse free flow check (12), model Z2FS 6 (data sheet RA 27 506). Turning adjustment (13) clockwise will increase the shifting time.

Conversion from option "S" meter-in (13) to option "S2" meter-out (14) requires removal of the pilot valve (4). The O-ring plate (15) remains with the main valve housing (1), while the throttle valve is rotated around the longitudinal axis. Pilot valve (4) is then re-installed. Tightening torque for bolts (16) is 6.5 lb-ft (8.9 Nm).

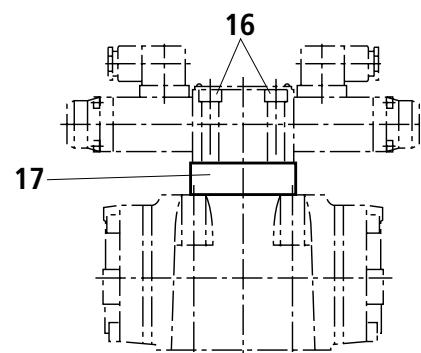

Model 4WEH 10 .4X/...S or S2

### Pilot pressure reducing valve (option "D3")

To achieve smoother shifts with internally piloted valves, reduce internal pilot pressure to minimum values, and optimize the pilot choke, meter-out throttle (S2). Option "D3", model ZDR 6 DP2-5x/75YM sandwich mounted reducing valve (see data sheet RA 26 569) can be adjusted from approximately 30 PSI (2 bar) to 1000 PSI (75 bar). A pressure setting of 200 PSI (14 bar) to 400 PSI (28 bar) is usually adequate.

#### Please note:

The minimum pilot pressures stated on page 9, must be increased by 1.515 when the fixed ratio pilot pressure valve is applied.

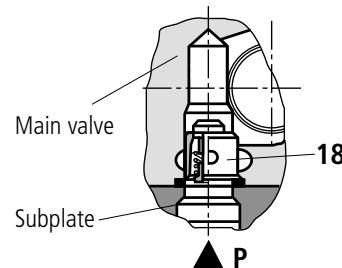

Model 4WEH 10 .4X/.../..D3

### Port "P" pilot pressure insert (option P 4.5)

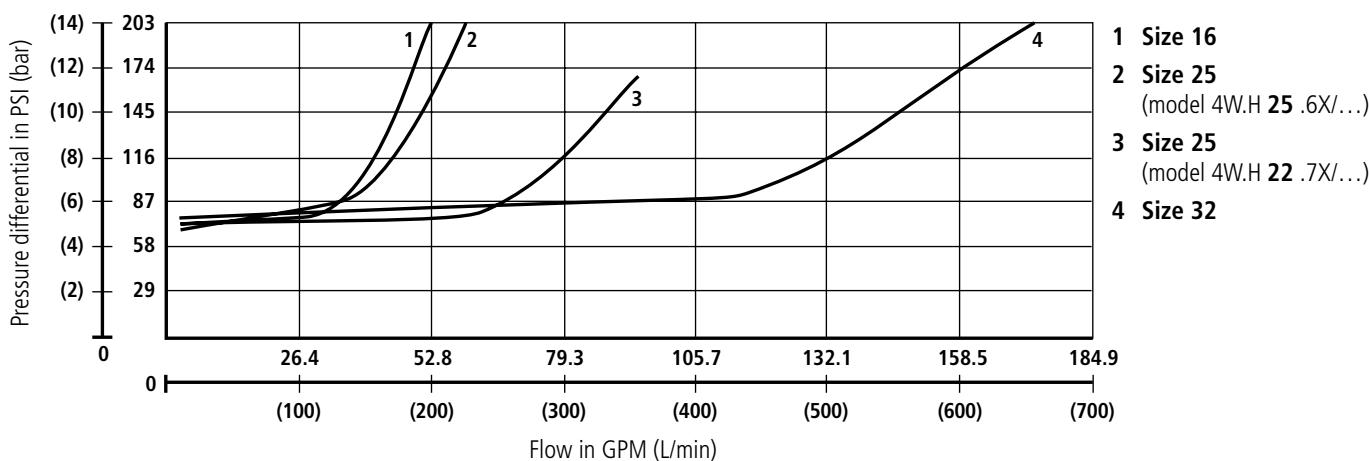

(not available for size 10, order sandwich plate Model Z1S 10 P3-3X S01)

For internally piloted valves with open or tandem center spools (types C, F, G, H, P, T, V, Z, S), minimum pilot pressure requirements can be achieved by using a pilot pressure insert (18) in port "P" of the main valve. This design permits the main valve to be internally piloted and internally drained. The pressure drop of the pilot pressure insert (see graph below) is in addition to the pressure drop of the main valve (see performance curves). The cracking pressure of a "P 4.5" pilot pressure insert is approximately 65 PSI (4.5 bar).

Size	Order number P 4.5
16	RR00 302628
25 (model 4W.H 22 .7X/...)	RR00 315596
25 (model 4W.H 25 .6X/...)	RR00 303717
32	RR00 317066

#### General:

Because of silting, the shifting function of the valves is dependent upon filtration. To obtain the maximum flow values shown, full filtration of 25 µm is recommended. The flow forces acting within the valve also influence performance. In 4-way valves, the data provided is for applications with 2 directions of flow (flow from P to A and an equal, simultaneous return flow from B to T) (see left). If only one direction of flow is required, for example, when a 4-way valve has one port plugged, or unbalanced flows from large rod cylinders, permissible flow in critical cases can be considerably lower.

**Performance limits measured with solenoids at operating temperature, 10% undervoltage and without tank port pressure.**

**Characteristic curves:** Model 4 WEH 16... measured at  $v = 190$  SUS (41 mm<sup>2</sup>/s) and  $t = 122$  °F (50 °C)

2-position valves Permissible flow $q_v$ in GPM (L/min)					Pre-load valve, required for X = internal	Regarding the performance limits, see "General", pages 12, 13.	
Spool	Operating pressure $p_{max}$ in PSI (bar)						
with spring offset in the main valve <sup>1)</sup>	1015 (70)	2031 (140)	3046 (210)	4061 (280)	5076 (350)		
C, D, K, Z, Y	79.3 (300)	79.3 (300)	79.3 (300)	79.3 (300)	79.3 (300)	Spools C, Z up to approx. 42.3 GPM (160 L/min)	Attention! When using 4/3-way directional valves with spring-centering of the control spool in the main valve, above given performance limits, a higher pilot pressure is required. Example: At an operating pressure of $p_{max} = 5076$ PSI (350 bar) and a flow of $q_v = 79.3$ GPM (300 L/min), a pilot pressure of 232 PSI (16 bar) is required.

R, U, V, W	185 (700)	185 (700)	185 (700)	185 (700)	172 (650)		
G, T	106 (400)	106 (400)	106 (400)	106 (400)	106 (400)		
at > 435 PSI (30 bar) pilot pressure							
G, T	185 (700)	185 (700)	185 (700)	185 (700)	172 (650)		

**Characteristic curves:** Model 4 WEH 32... measured at  $v = 190$  SUS (41 mm<sup>2</sup>/s) and  $t = 122$  °F (50 °C)

1) only with spool R

2) not with spool R

**Performance limits:** Model 4 WEH 32... measured at  $v = 190$  SUS (41 mm<sup>2</sup>/s) and  $t = 122$  °F (50 °C)

2-position valves Permissible flow $q_v$ in GPM (L/min)						Pre-load valve, required for X = internal	Regarding the performance limits, see "General", pages 12 and 13.
Spool	Operating pressure $p_{max}$ in PSI (bar)						
with spring offset in the main valve <sup>1)</sup>							
C, D, K, Z, Y	291 (1100)	275 (1040)	227 (860)	198 (750)	180 (680)		
with spring offset in the main valve <sup>2)</sup>							
C	291 (1100)	275 (1040)	227 (860)	211 (800)	185 (700)	Spool C in general, spool Z up to approx. 47.6 GPM (180 L/min)	Attention! When using 4/3-way directional valves with spring-centering of the control spool in the main valve, above performance limits, a higher pilot pressure is required. Example: At an operating pressure of $p_{max} = 5076$ PSI (350 bar) and a flow of $q_v = 291$ GPM (1100 L/min), a pilot pressure of 218 PSI (15 bar) is required.
D, Y	291 (1100)	275 (1040)	143 (540)	127 (480)	111 (420)		
K	291 (1100)	275 (1040)	227 (860)	132 (500)	119 (450)		
Z	291 (1100)	275 (1040)	227 (860)	185 (700)	172 (650)		
with hydraulic offset in the main valve						Spool HC in general, spool HZ up to ~47.6 GPM (180 L/min)	The maximum flow for those valves is therefore only dependent on the $\Delta p$ value which is acceptable for the system.
HC, HD, HK,	291 (1100)	275 (1040)	227 (860)	198 (750)	180 (680)		
HZ, HY	291 (1100)	275 (1040)	227 (860)	198 (750)	180 (680)		
3-position valves Permissible flow $q_v$ in GPM (L/min)						Pre-load valve, required for X = internal	1) The flow values given are achieved when the minimum pilot pressure of 145 PSI (10 bar) is present.
spring-centered							
E, J, L, M, Q, R, U, W	291 (1100)	275 (1040)	227 (860)	198 (750)	180 (680)	Spools F, G, H, P and T in general, spool V up to ~47.6 GPM (180 L/min)	2) The flow values given are limiting values at which the return spring can return the valve when the pilot pressure fails.
G, T, H, F, P	238 (900)	238 (900)	211 (800)	172 (650)	119 (450)		
V	291 (1100)	264 (1000)	180 (680)	132 (500)	119 (450)		
pressure-centered; at min. pilot pressure of 123 PSI (8.5 bar)							
for all spools	291 (1100)	275 (1040)	227 (860)	198 (750)	180 (680)		

## Unit dimensions

---

- 1** Main valve  
**2** Pilot valve model 4WE 6... to data sheet RA 23 178<sup>2)</sup>

**⚠ Attention!**

Dimensions of size 10, 22, 25 and 32 correspond to the standard valve "6A" to data sheet RA 23 177

Dimensions of size 16 correspond to the standard valve "6E" to data sheet RA 23 178

- 2.1** • Pilot valve model 4WE 6 D... (1 solenoid) for main valves with spools C, D, K, Z and spools HC, HD, HK, HZ  
 • Pilot valve model 4WE 6 J... (1 solenoid "a") for main valves with spools EA, FA, etc., spring return  
 • Pilot valve model 4WE 6 M... (1 solenoid "a") for main valves with spools HEA, HFA, etc., hydraulic spool return
- 2.2** • Pilot valve model 4WE 6 Y... (1 solenoid) for main valves with spool Y and spool HY  
 • Pilot valve model 4WE 6 J... (1 solenoid "b") for main valves with spools EB, FB, etc., spring return  
 • Pilot valve model 4WE 6 M... (1 solenoid "b") for main valves with spools HEB, HFB, etc., hydraulic spool return
- 2.3** • Pilot valve model 4WE 6 J... (2 solenoids) for main valves with 3 positions, spring-centered  
 • Pilot valve model 4WE 6 M... (2 solenoids) for main valves with 3 positions, pressure-centered
- 3.1** Solenoid "a" (grey plug-in connector)  
**3.2** Solenoid "b" (black plug-in connector)
- 4** Manual override "N", optional  
 – The manual override can only be operated up to a tank pressure of up to approx. 725 PSI (50 bar). Take care not to damage the manual override bore!

- 5** Solenoid without manual override  
**6** Height of connector plate for hydraulic operation (model 4WH...)  
**7** Optional pilot choke adjustment, Model Z2FS 6-2-4X/1QV, see RA 27 506  
**8** Pressure reducing valve, optional  
**9** Machined valve mounting surface, position of ports  
**10** Nameplate for the pilot valve  
**11** Nameplate for the entire valve  
**12** R-rings/O-rings  
**13** Space required to remove the plug-in connector  
**14** 2-position valves with spring offset in the main valve (C, D, K, Z)  
**15** 2-position valves with spring offset in the main valve (Y)  
**16** 3-position valves, spring-centered;  
 2-position valves with hydraulic offset in the main valve  
**17** 3-position valves, pressure-centered  
**18** Locating pin

**Order no. – Seal kit for main valve**

**Unit dimensions, Model 4 WEH 10... : dimensions in inches (millimeters)**

Porting pattern to ISO 4401-5 NFPA T 3.5.1 M R1 and ANSI B 93.7 D 05

**Subplates**, see data sheet RA 45 054;

Internally piloted, internally drained valves only:

G 534/05 (3/4" NPT);

G 534/12 (SAE-12; 1 1/16-12);

G 535/05 (3/4" NPT);

G 535/12 (SAE-12; 1 1/16-12);

G 536/05 (1" NPT);

G 536/12 (SAE-16; 1 5/16-12);

For description of numbered items, see page 17

**Valve Mounting Bolts**

4) 1/4-20 UNC x 1 3/4" (M6 x 45 mm)  
(UNC bolt kit # US00 833 367)

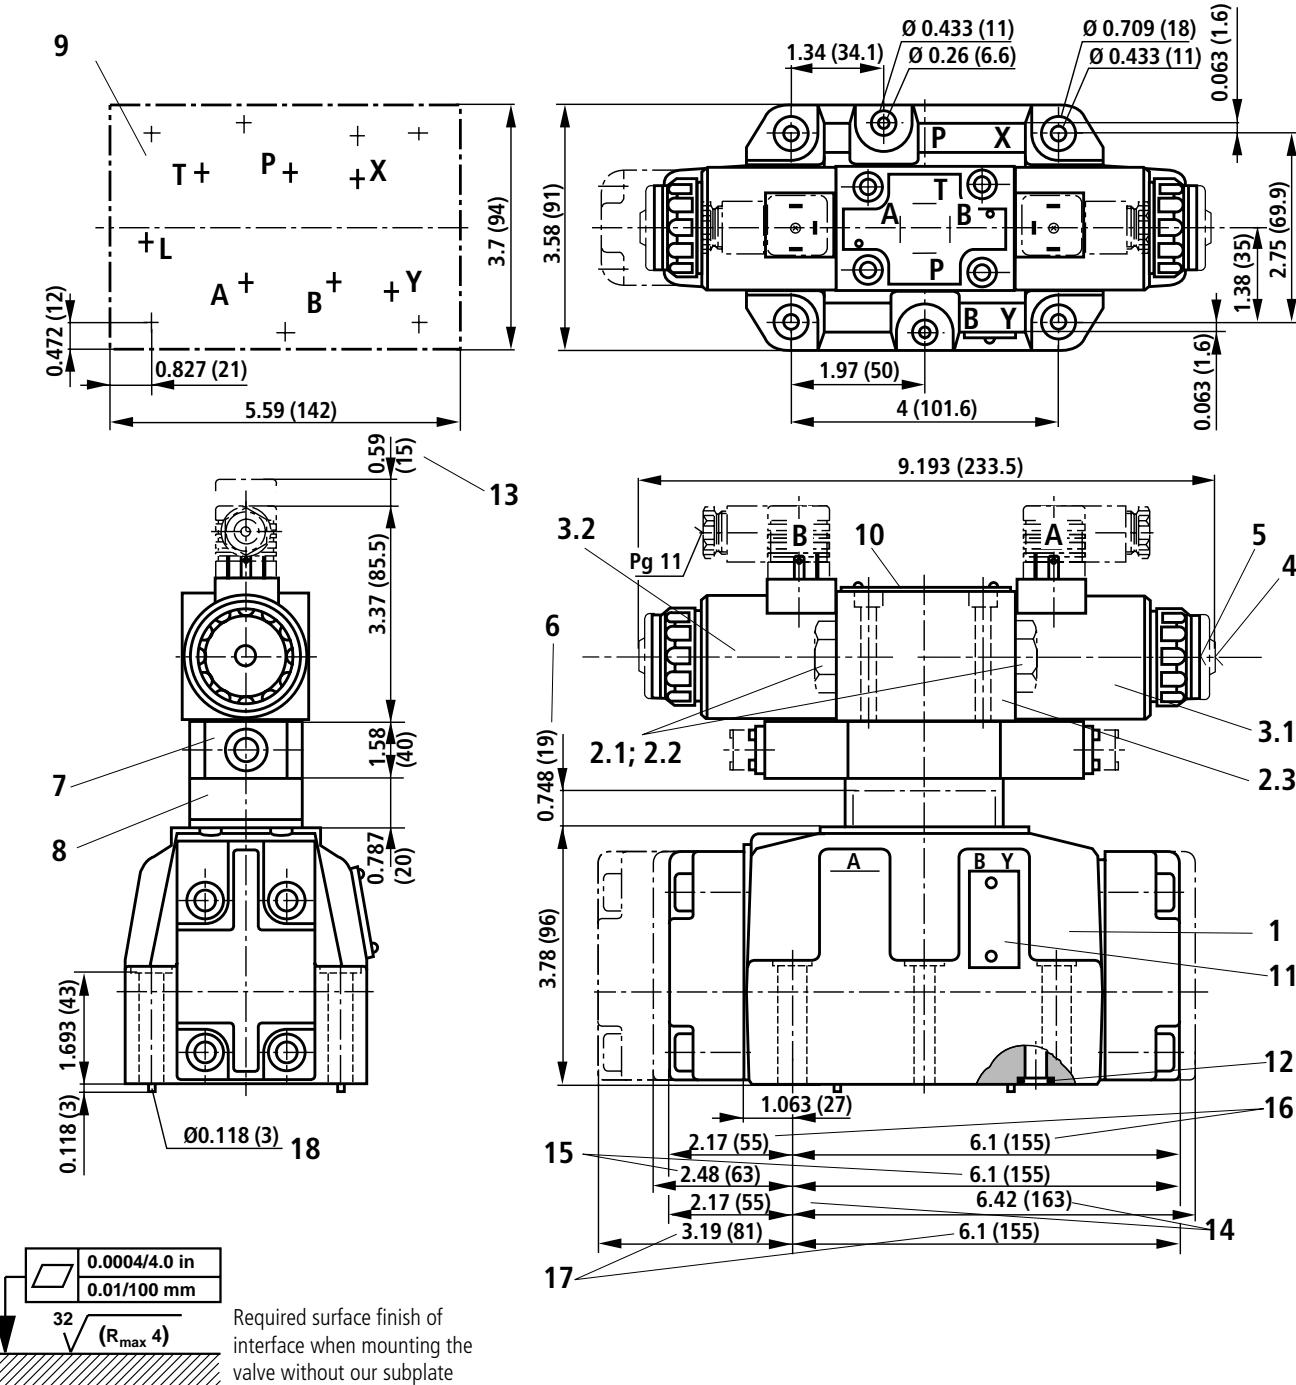

Socket head cap screws, SAE grade 8 or better  
Tightening torque 11.5 lb-ft (15.5 Nm)

Subplates and valve mounting bolts must be ordered separately

**Note:**

Pilot valve dimensions for designation 6E (removable solenoids), see data sheet RA 23 178

**Unit dimensions**, Model 4 WEH 16... : dimensions in inches (millimeters)

Porting pattern to ISO 4401-7 NFPA T 3.5.1 M R1 and ANSI B 93.7 **D 07**

**Subplates**, see data sheet RA 45 056;

G 172/05 (3/4" NPT);

G 172/12 (SAE-12; 1 1/16-12);

G 174/05 (1" NPT);

G 174/12 (SAE-16; 1 5/16-12);

G 174/08 (3/4" ISO flanged ports)

For description of numbered items, see page 17

## Valve Mounting Bolts

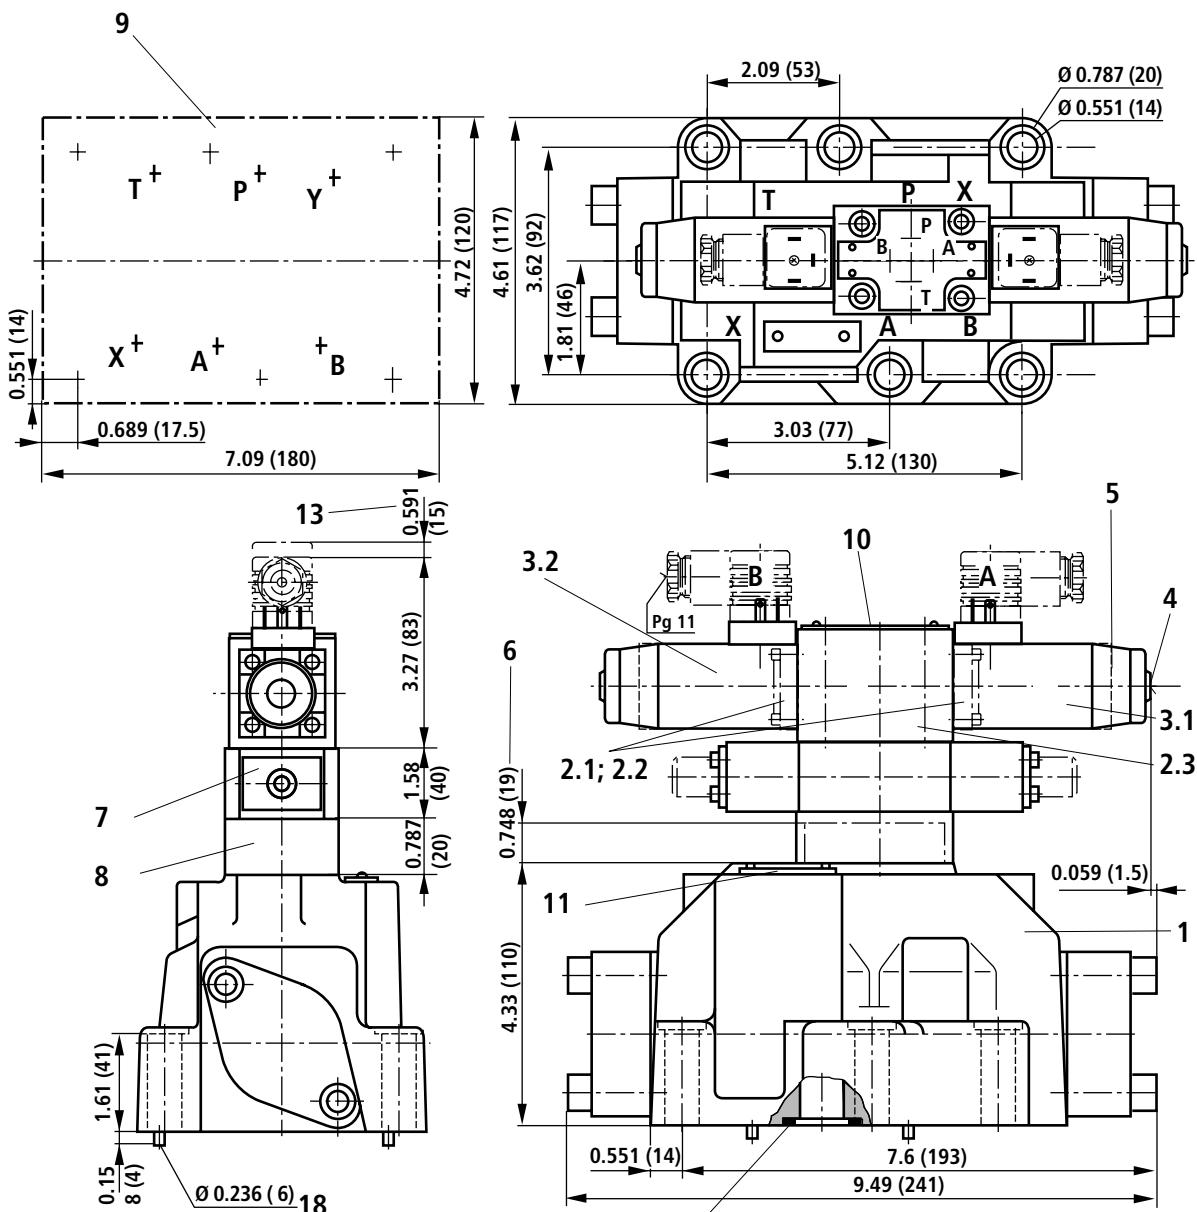

- 2) 1/4-20 UNC x 2 1/4" (M6 x 60 mm)  
 Tightening torque 11.5 lb-ft (15.5 Nm)

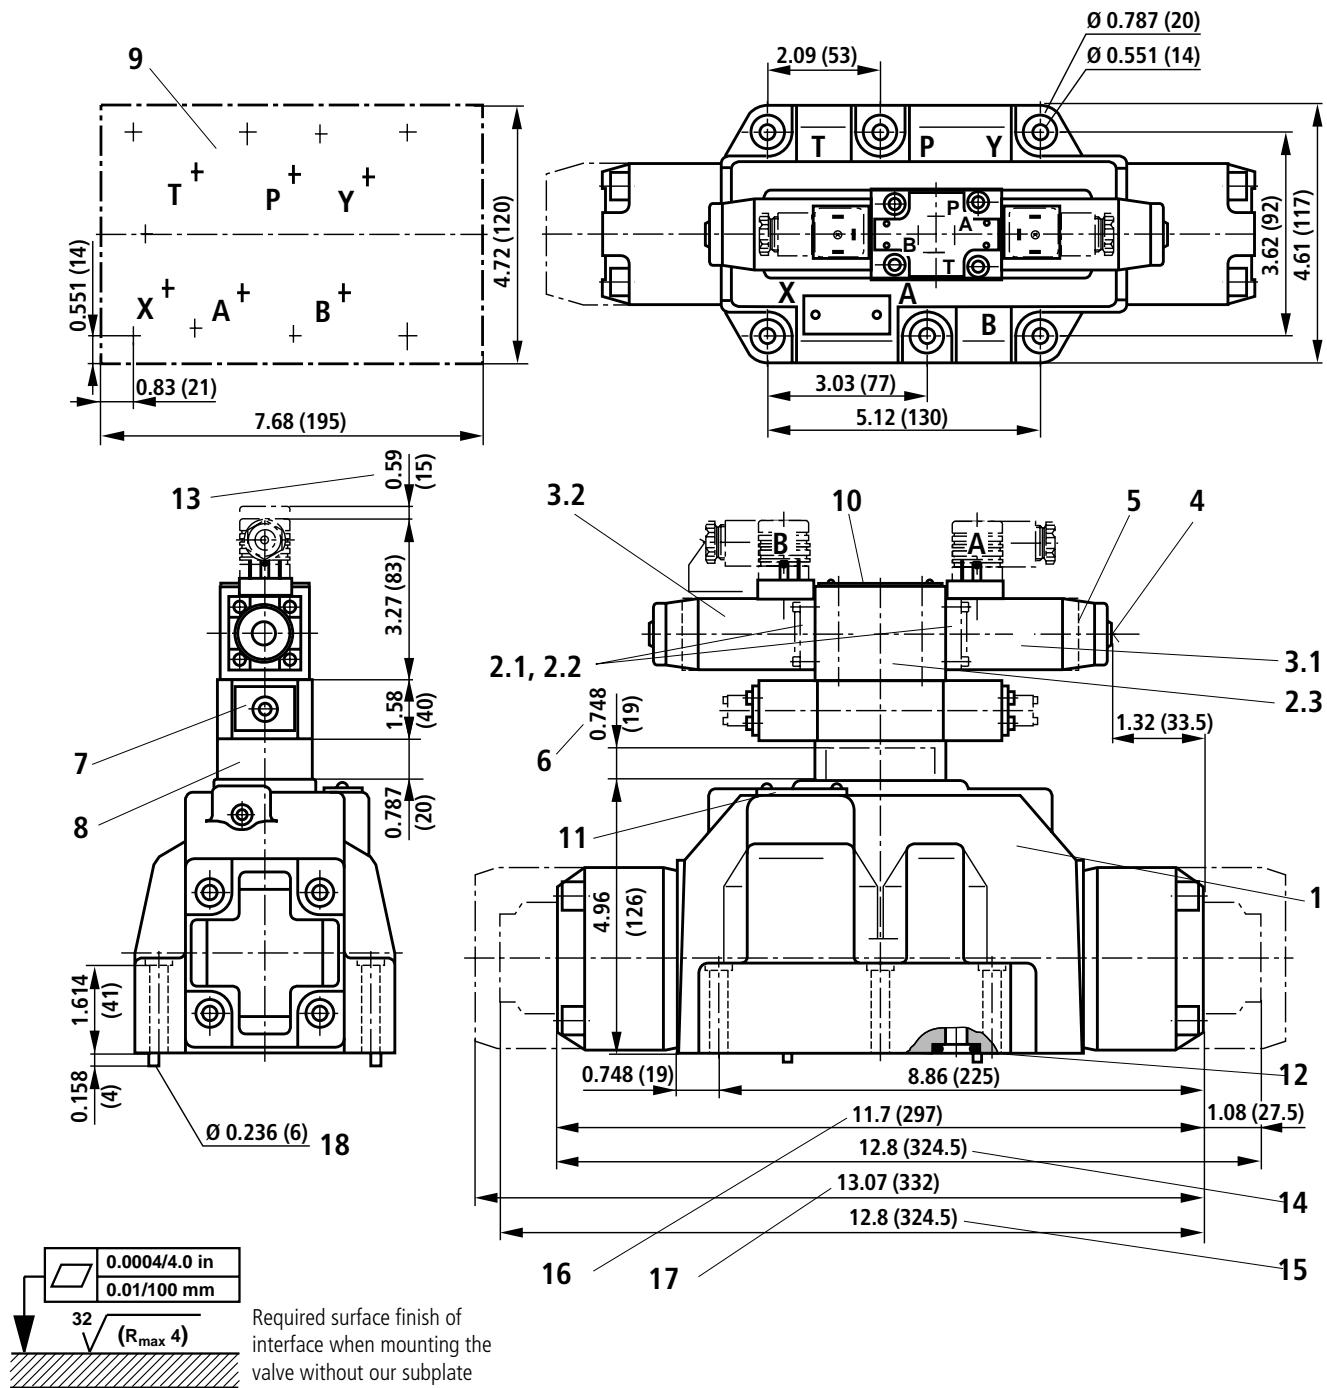

4) 3/8-16 UNC x 2 1/4" (M10 x 60 mm)  
 Tightening torque 55 lb-ft (75 Nm)  
 (UNC bolt kit # US00 833 395)

Socket head cap screws, SAE grade 8 or better  
 Subplates and valve mounting bolts must be ordered separately

### Note:

Pilot valve dimensions for designation 6E (removable solenoids), see RA 23 178

**Unit dimensions, Model 4 WEH 22... : dimensions in inches (millimeters)**

**Unit dimensions, Model 4 WEH 25... : dimensions in inches (millimeters)**

Porting pattern to ISO 4401-8 NFPA T 3.5.1 M R1 and ANSI B 93.7 D 08

**Subplates**, see data sheet RA 45 058;

- G 153/05 (1" NPT);
- G 155/12 (SAE-16; 1 5/16-12);
- G 154/05 (1 1/4" NPT);
- G 154/12 (SAE-20; 1 5/8-20);
- G 156/05 (1 1/2" NPT);
- G 156/12 (SAE-24; 1 7/8-20);
- G 154/21 (1 1/4" ISO flanged ports)

For description of numbered items, see page 17

**Valve Mounting Bolts**

6) 1/2-13 UNC x 2 1/2" (M12 x 60 mm)

Tightening torque 83 lb-ft (112 Nm)

(UNC bolt kit # US00 833 387)

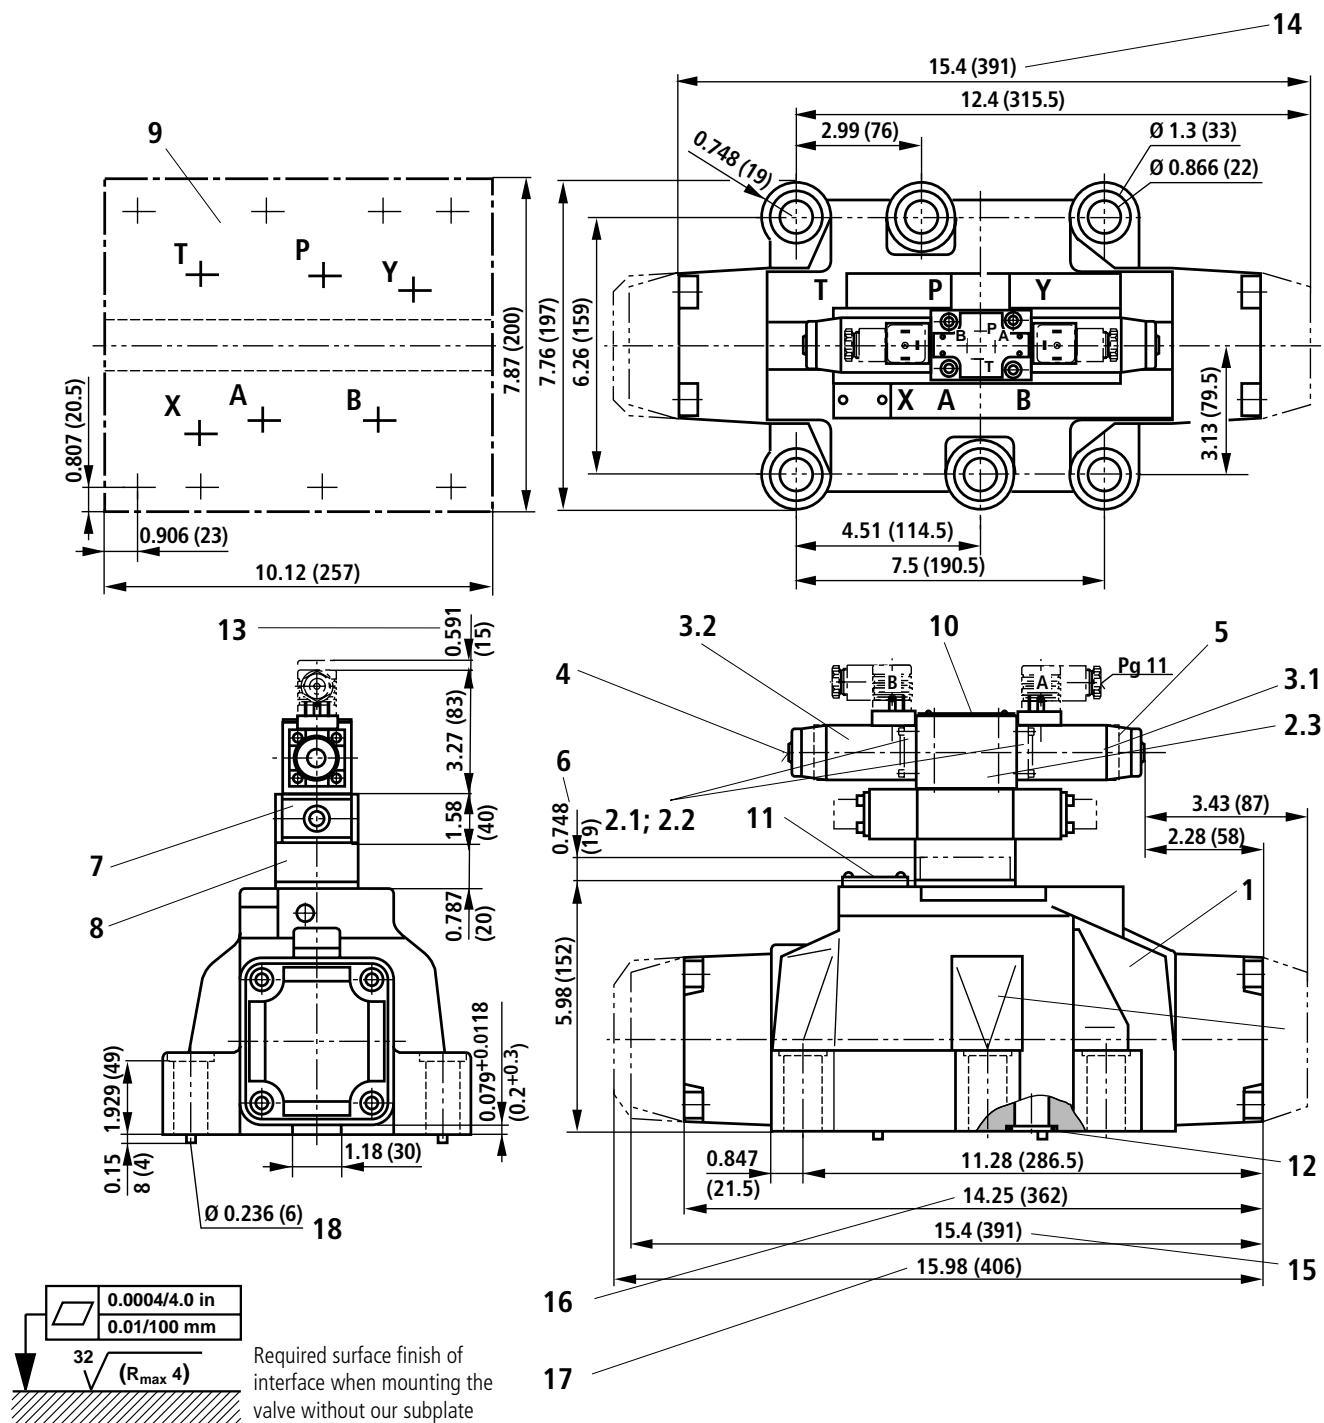

Socket head cap screws, SAE grade 8 or better

Subplates and valve mounting bolts must be ordered separately

**Note:**

Pilot valve dimensions for designation 6E (removable solenoids), see RA 23 178

**Unit dimensions**, Model 4 WEH 32... : dimensions in inches (millimeters)

Porting pattern to ISO 4401-10 NFPA T 3.5.1 M R1 and ANSI B 93.7, **D 10**

**Subplates**, see data sheet RA 45 060;

G 157/05 (1 1/2" NPT):

G 157/12 (SAE-24; 1 7/8-12);

G 157/12 (SAE 24, 1 1/2" 12),

For description of numbered items, see page 17.

### **Valve Mounting Bolts**

6) 3/4-10 UNC x 3 1/4" (M20 x 80 mm)

Tightening torque 295/320 lb·ft (400/430 Nm)

(UNC bolt kit # US00 833 394)

Socket head cap screws, SAE grade 8 or better

Subplates and valve mounting bolts must be ordered separately

Note:

Pilot valve dimensions for designation 6E (removable solenoids), see RA 23 178
