SINEAX V 624
Programmable Temperature Transmitter
for RTD and TC inputs

CAMILLE BAUER

**for rail mounting in housing P12/17
or P12/17 St**

CE 0102   ⟨Ex⟩ II (1) GD
Application

SINEAX V 624 (Figs. 1 and 2) is designed for **measuring temperature in combination with thermocouples or resistance thermometers**. Thermocouple non-linearities are automatically compensated.

The analogue output signal is either an impressed current or superimposed voltage which is linearly proportional to temperature and can be processed by other devices for purposes of displaying, recording and/or regulating a constant.

The input variable and measuring range are programmed with the aid of a PC and the corresponding software.

The sensor circuit is monitored for open and short-circuits and the output responds in a defined manner if one is detected.

The transmitter fulfils all the important requirements and regulations concerning electromagnetic compatibility **EMC** and **Safety** (IEC 1010 resp. EN 61 010). It was developed and is manufactured and tested in strict accordance with the **quality assurance standard** ISO 9001.

Features / Benefits

● **Input variable and measuring range programmed using PC / Simplifies project planning and engineering, short delivery times, low stocking levels**

Measured variables	Limits	Measuring ranges	
		Min. span	Max. span
Temperatures with resistance thermometers for **two-, three-** or **four-**wire connection Pt 100, IEC 60 751	– 200 to 850 °C	50 K	850 K
Ni 100, DIN 43 760	– 60 to 250 °C	50 K	250 K
Temperatures with thermocouples Type B, E, J, K, N, R, S, T acc. to IEC 60 584-1 Type L and U, DIN 43 710 Type W5 Re/W26 Re, Type W3 Re/W25 Re acc. to ASTM E 988-90	acc. to type	2 mV	80 mV

● **Electric isolation between input, output 2.3 kV and power supply 3.7 kV / Fulfils EN 61 010**

● **Wide DC, AC power pack tolerance / Universal**

● **Available in type of protection "Intrinsic safety" [EEx ia] IIC** (see "Table 3: Data on explosion protection")

● **Ex devices also directly programmable on site / No supplementary Ex interface needed**

● **Open and short-circuit sensor circuit supervision / Defined output response should the supervision pick up**

● **Programmable with or without power supply connection**

● **Housing only 17.5 mm wide** (size **P12/17** housing) **/ Low space requirement**

● **Other programmable parameters: specific measured variable data** (e.g. **two**, **three** or **four-**wire connection for resistance thermometers, "internal" or "external" cold junction compensation of thermocouples etc.), **transmission mode, operating sense** (output signal directly or inversely proportional to the measured variable) **and open-circuit sensor supervision** (output signal assumes fixed preset value between – 5 and 110%) **/ Highly flexible solutions for measurement problems**

● **Software calibration of beginning and end of output signal range**

● **Digital measured variable data available at the programming interface / Simplifies commissioning, measured variable and signals can be viewed on PC in the field**

Programmation

A PC, the programming cable PK 610 plus ancillary cable and the programming software V 600 *plus* are required to program the transmitter. (Details of the programming cable and the software are to be found in the separate data sheet: PK 610 Le.)

The connections between
«PC ↔ PK 610 ↔ SINEAX V 624» can be seen from Fig. 3. The transmitter can be programmed either with or without the power supply connected.

The software V 600 *plus* is supplied on one CD and runs under Windows 3.1x, 95, 98, NT and 2000.

The programming cable PK 610 adjusts the signal level between the PC and the transmitter SINEAX V 624.

The programming cable PK 610 is used for programming both standard and Ex versions.

Fig. 3. Example of the set-up for programming a SINEAX V 624 in standard version without the power supply. For this case the switch on the interface must be set to "ON".
