

# Proportional 2-way cartridges high performance

**digital**, with two position transducers, ISO 7368 sizes from 16 to 100, rugged design

## LIQZO-LEB, LIQZP-LEB LIQZO-LES, LIQZP-LES

High Performance 2-way proportional cartridge valves specifically designed for high speed closed loop controls.

They are equipped with two LVDT position transducers for best dynamics in not compensated flow regulations.

The cartridge execution for blocks installation grants high flow capabilities and minimized pressure drops.

The integral digital electronic driver performs the valve's hydraulic regulation according to the reference signal and assures valve-to-valve interchangeability thanks to the factory presetting.

High performances valves are available in LEB basic execution with analog reference signals and USB port for software functional parameters setting or in LES full execution which includes also optional fieldbus interfaces for functional parameters setting, reference signals and real-time diagnostics

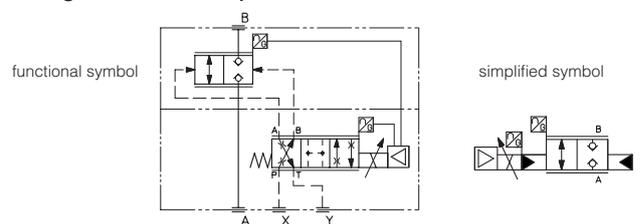

**LIQZO:** sizes from **16 to 40**,  
Max flow: **600 to 2500 l/min**  
Max pressure: **350 bar**

**LIQZP:** sizes from **50 to 100**,  
Max flow: **4000 to 16.000 l/min**  
Max pressure: **420 bar**

### Configuration: 2 = 2 way

(1) LEB available only in version SN-NP (2) Double power supply only for LES

## 2 GENERAL NOTES

LIQZO-LEB, LES and LIQZP-LEB, LES proportional cartridges are **CE** marked according to the applicable Directives (e.g. Immunity/Emission EMC Directive and Low Voltage Directive). Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in table F003 and in the installation notes supplied with relevant components.

The electrical signals of the valve (e.g. monitor signals) must not be directly used to activate safety functions, or components, as prescribed by the European standards (Safety requirements of fluid technology systems and components-hydraulics, EN-982).

### WARNING

To avoid overheating and possible damage of the electronic driver, the valves must be never energized without hydraulic supply to the pilot stage. In case of prolonged pauses of the valve operation during the machine cycle, it is always advisable to disable the driver (option /Q or /Z)

A safety fuse 2,5 A installed on 24Vdc power supply of each valve is always recommended, see also Power supply note at sections 9

### WARNING

The loss of the pilot pressure causes the undefined position of the main poppet.

The sudden interruption of the power supply during the valve operation causes the immediate shut-off of the main poppet.

This could cause pressure surges in the hydraulic system or high decelerations which may lead to machine damages.

## 3 FIELDBUS - only for LES

Fieldbus allows the direct communication of the proportional valve with machine control unit for digital reference signal, diagnostics and settings of functional parameters. Analog reference signal remain available on the main connector for quick commissioning and maintenance. For detailed information about fieldbus features and specification see tech table **GS510**.

## 4 MAIN CHARACTERISTICS - based on mineral oil ISO VG 46 at 50 °C

**2** = LIQZP-L\*-63\*

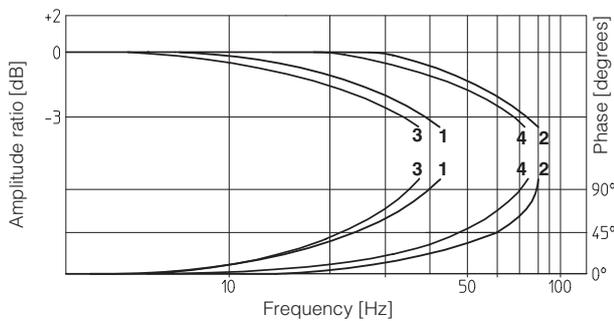

**3** = LIQZP-L\*-80\*  
**4** = LIQZP-L\*-100\*

## 7.2 Response time

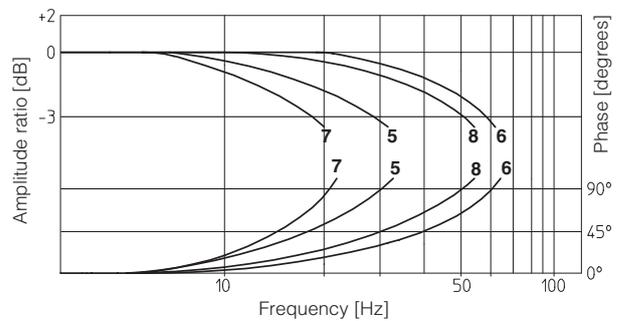

The response times in below diagrams are measured at different steps of the reference input signal. They have to be considered as average values. For the valves with digital electronics the dynamics performances can be optimized by setting the internal software parameters.

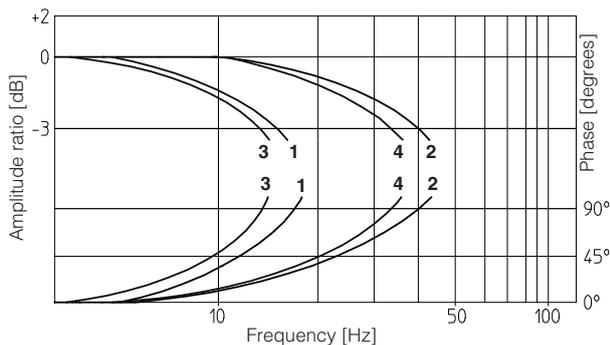

## 7.3 Bode diagrams - stated at nominal hydraulic conditions

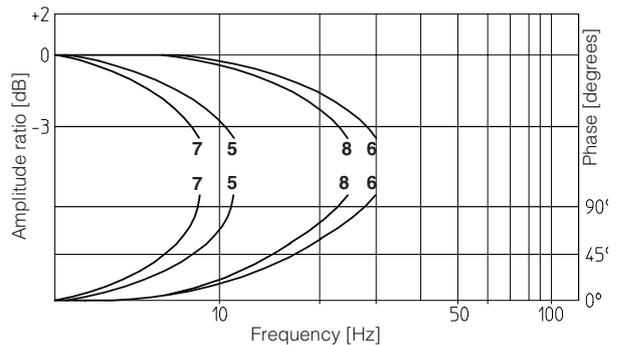

- 1 = LIQZO-L\*-16\*: 10% ↔ 90%
- 2 = LIQZO-L\*-16\*: 50% ± 5%
- 3 = LIQZO-L\*-25\*: 10% ↔ 90%
- 4 = LIQZO-L\*-25\*: 50% ± 5%

- 5 = LIQZO-L\*-32\*: 10% ↔ 90%
- 6 = LIQZO-L\*-32\*: 50% ± 5%
- 7 = LIQZO-L\*-40\*: 10% ↔ 90%
- 8 = LIQZO-L\*-40\*: 50% ± 5%

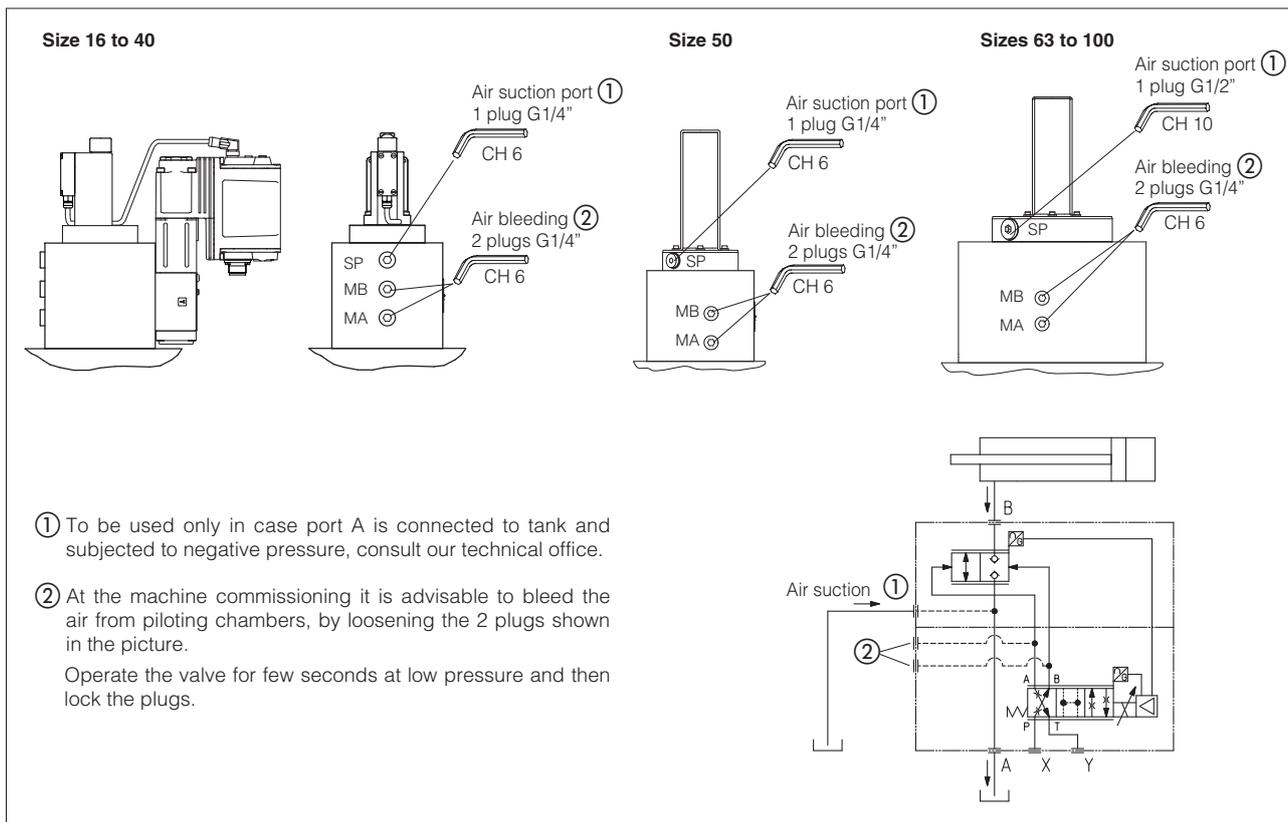

- 1 = LIQZP-L\*-50\*: 10% ↔ 90%
- 2 = LIQZP-L\*-50\*: 50% ± 5%
- 3 = LIQZP-L\*-63\*: 10% ↔ 90%
- 4 = LIQZP-L\*-63\*: 50% ± 5%

- 7 = LIQZP-L\*-100\*: 10% ↔ 90%
- 8 = LIQZP-L\*-100\*: 50% ± 5%

## 8 AIR BLEEDING

## 9 ELECTRONIC OPTIONS

Standard driver execution provides on the 7 pin main connector:

**Power supply** - 24 VDC must be appropriately stabilized or rectified and filtered; **2,5 A** fuse time lag is required in series to each driver power supply. Apply at least a 10000  $\mu$ F/40 V capacitance to single phase rectifiers or a 4700  $\mu$ F/40 V capacitance to three phase rectifiers

**Reference input signal** - analog differential input with  $\pm 10$  VDC nominal range (pin D, E), proportional to desired valve poppet position

**Monitor output signal** - analog output signal proportional to the actual valve's poppet position with  $\pm 10$  VDC nominal range

**Note:** a minimum booting time between 400 and 800 ms has been considered from the driver energizing with the 24 Vdc power supply before the valve has been ready to operate. During this time the current to the valve coils is switched to zero.

### 9.1 Option /F

It provides a Fault output signal in place of the Monitor output signal, to indicate fault conditions of the driver (cable interruption of poppet transducers or reference signal - for /I option): Fault presence corresponds to 0 VDC, normal working corresponds to 24 Vdc

### 9.2 Option /I

It provides 4  $\div$  20 mA current reference and monitor signals, instead of the standard 0  $\div$  +10 V.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of  $\pm 10$  V or  $\pm 20$  mA.

It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage.

### 9.3 Option /Q

To enable the driver, supply 24 VDC on pin C referred to pin B: Enable input signal allows to enable/disable the current supply to the solenoid, without removing the electrical power supply to the driver; it is used to maintain active the communication and the other driver functions when the valve has to be disabled. This condition does not comply with European Norms EN13849-1 (ex EN954-1).

### 9.4 Option /Z

It provides, on the 12 pin main connector, the following additional features:

#### Enable Input Signal

To enable the driver, supply 24 VDC on pin 3 referred to pin 2: Enable input signal allows to enable/disable the current supply to the solenoid, without removing the electrical power supply to the driver; it is used to maintain active the communication and the other driver functions when the valve has to be disabled. This condition does not comply with European Norms EN13849-1 (ex EN954-1).

#### Fault Output Signal

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal cable broken for 4 $\div$ 20mA input, etc.). Fault presence corresponds to 0 Vdc, normal working corresponds to 24 VDC (pin 11 referred to pin 2): Fault status is not affected by the Enable input signal

#### Power supply for driver's logics and communication - only for LES

Separate power supply (pin 9,10) allow to cut solenoid power supply (pin 1,2) while maintaining active diagnostics, USB and fieldbus communication. A safety fuse is required in series to each driver power supply: 500 mA fast fuse.

### 9.5 Possible combined options

/FI, /IQ and /IZ

## 10 ELECTRONIC CONNECTIONS AND LEDS

### 10.1 Main connector signals - 7 pin - standard, /F and /Q options (A1)

| PIN | Standard                       | /Q     | /F    | TECHNICAL SPECIFICATIONS   | NOTES  |
|-----|--------------------------------|--------|-------|--|--|
| A   | V+                             |        |       | Power supply 24 Vdc Rectified and filtered: $V_{RMS} = 20 \div 32 V_{MAX}$ (ripple max 10 % $V_{PP}$ )   | Input - power supply                                 |

| DATA SHEET        | GS208, GS210, K500 |                  |             |                |                |

only for LES

**13 PROGRAMMING TOOLS** - see table **GS500**

Valve's functional parameters and configurations, can be easily set and optimized using Atos E-SW programming software connected via USB port to the digital driver. For fieldbus versions, the software permits valve's parameterization through USB port also if the driver is connected to the central machine unit via fieldbus.

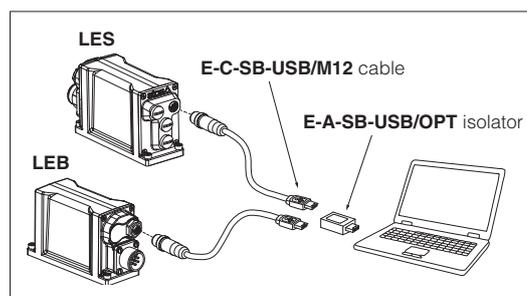

The software is available in different versions according to the driver's options:

- E-SW-BASIC** support: NP (USB) PS (Serial) IR (Infrared)  
**E-SW-FIELDBUS** support: BC (CANopen) BP (PROFIBUS DP) EH (EtherCAT)  
 EW (POWERLINK) EI (EtherNet/IP) EP (PROFINET IRT)  
**E-SW-\*/PQ** support: valves with SP, SF, SL alternated control (e.g. E-SW-BASIC/PQ)

**WARNING: drivers USB port is not isolated!**

The use of isolator adapter is highly recommended for PC protection (see table **GS500**)

**USB connection**

**14 FASTENING BOLTS and VALVE MASS**

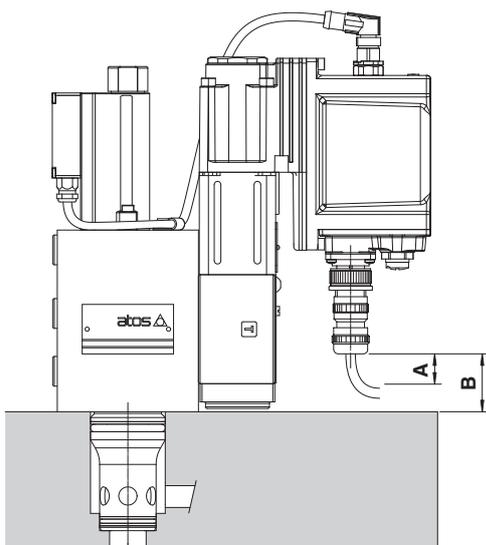

| LIQZO |                                |                   |           |

(1) Fastening bolts supplied with the valve

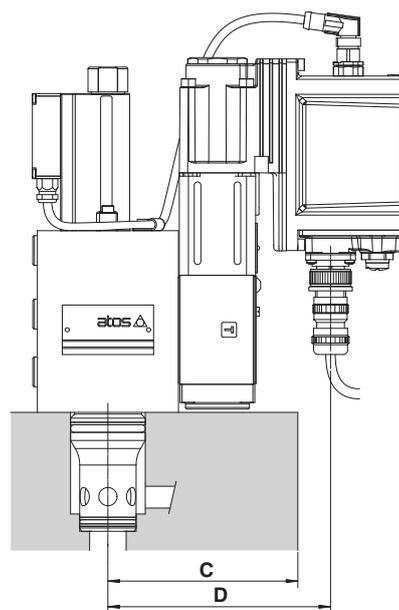

**15 MAIN CONNECTORS INSTALLATION DIMENSIONS**

**Installation 1** - possible interference between manifold and main connector

**A** = 15 mm space to remove the 7 or 12 pin main connectors  
**B** = Clearance between main connector to valve's mounting surface.  
 See the below table to verify eventual interferences, depending to the valve size and connector type

**Installation 2** - no interference

**C** = Max manifold dimension to avoid interference with the main connector, see below table

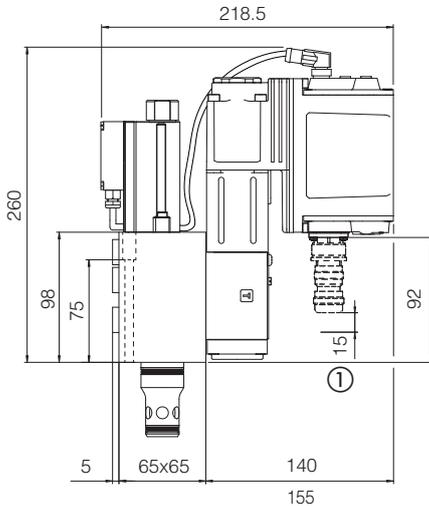

| Reference dimension | Main connector code | Valve size    |               |               |               |               |               |               |     |
|---------------------|---------------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|-----|

Above dimensions refer to the main connector fully screwed to driver's connector. The space **A** = 15 mm to remove the connector must be considered

**Note 1:** the connector installation can be performed only if the valve's driver protrudes from the edge of the relevant mounting manifold as represented in above "Installation 2"

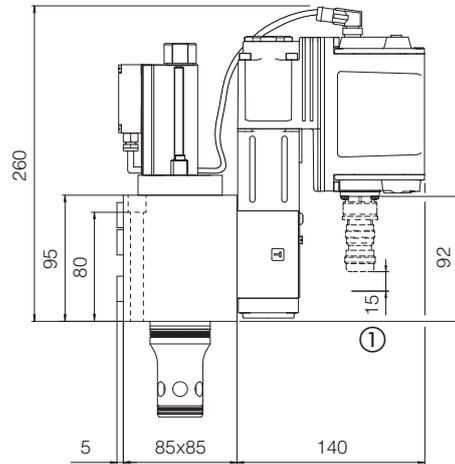

**Note 2:** the connector installation may be critic, depending to the cable size and bending radius

**LIQZO-LEB-162**  
**LIQZO-LES-162**

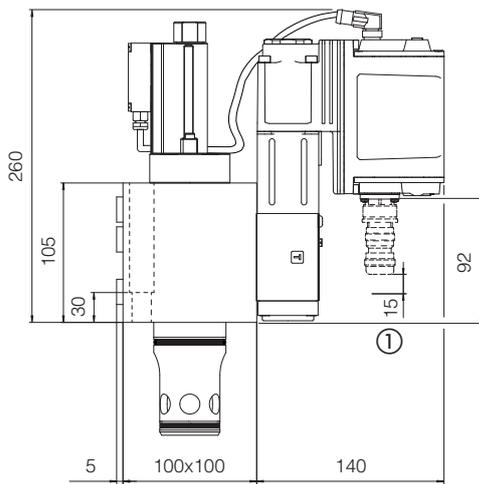

for **EW** - POWERLINK,  
**EI** - EtherNet/IP,  
**EP** - PROFINET IRT

**LIQZO-LEB-252**  
**LIQZO-LES-252**

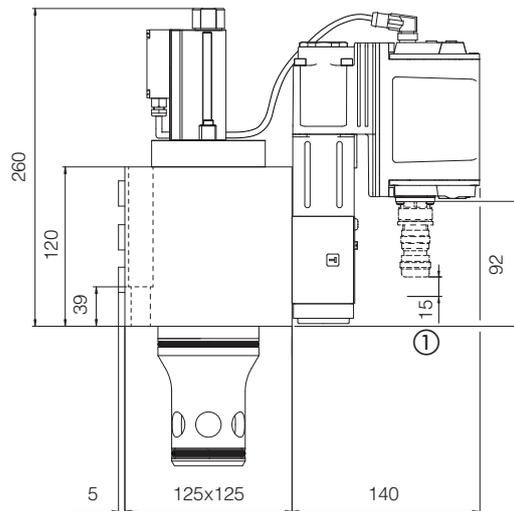

for **EW** - POWERLINK,  
**EI** - EtherNet/IP,  
**EP** - PROFINET IRT

**LIQZO-LEB-322**  
**LIQZO-LES-322**

for **EW** - POWERLINK,  
**EI** - EtherNet/IP,  
**EP** - PROFINET IRT

**LIQZO-LEB-402**  
**LIQZO-LES-402**

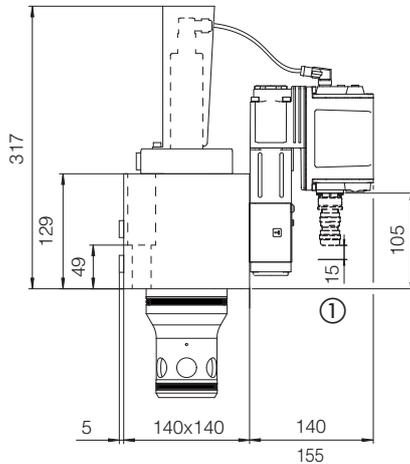

for **EW** - POWERLINK,  
**EI** - EtherNet/IP,  
**EP** - PROFINET IRT

① Space to remove the 7 or 12 pin main connector. For main and communication connectors see section 11, 12

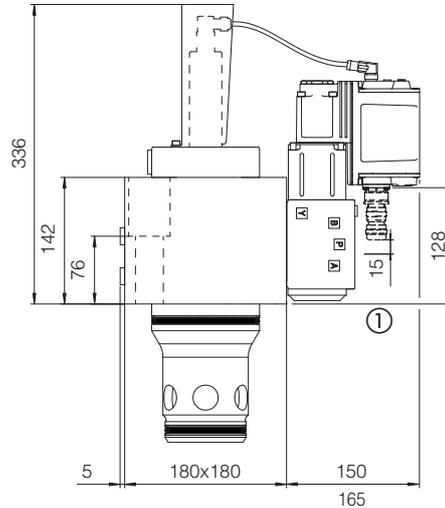

**Note:** for mounting surface and cavity dimensions, see table P006

**LIQZP-LEB-502**  
**LIQZP-LES-502**

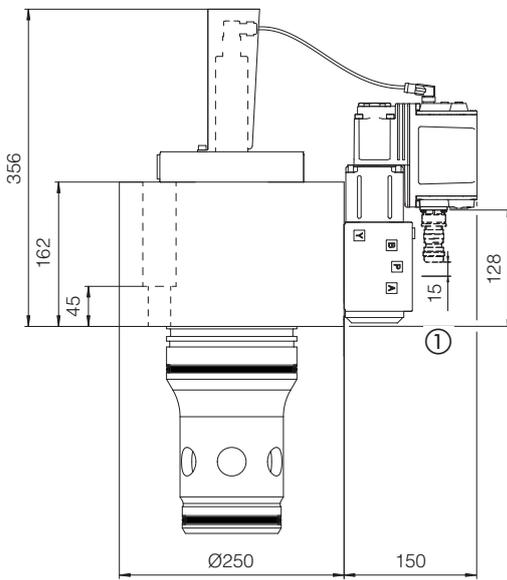

for **EW** - POWERLINK,  
**EI** - EtherNet/IP,  
**EP** - PROFINET IRT

**LIQZP-LEB-632**  
**LIQZP-LES-632**

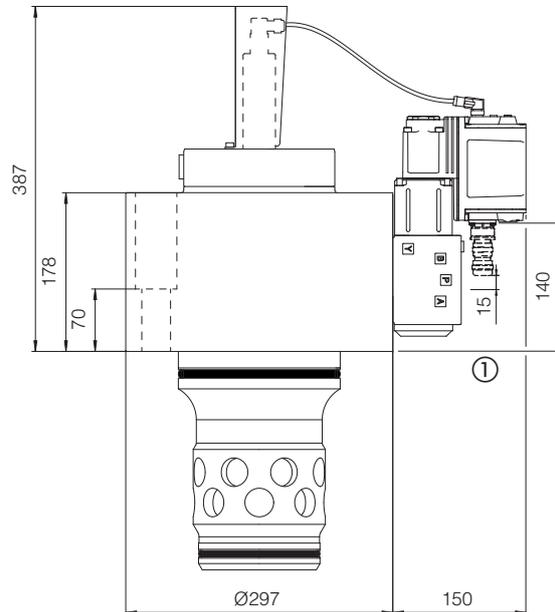

for **EW** - POWERLINK,  
**EI** - EtherNet/IP,  
**EP** - PROFINET IRT

**LIQZP-LEB-802**  
**LIQZP-LES-802**

for **EW** - POWERLINK,  
**EI** - EtherNet/IP,  
**EP** - PROFINET IRT

**LIQZP-LEB-1002**  
**LIQZP-LES-1002**

for **EW** - POWERLINK,  
**EI** - EtherNet/IP,  
**EP** - PROFINET IRT

① Space to remove the 7 or 12 pin main connector. For main and communication connectors see section [11](#), [12](#)

**Note:** for mounting surface and cavity dimensions, see table P006
