

GTR – torsionally rigid coupling: introduction

- Made in steel fully turned with standard treatment of phosphating.
- Disc pack in stainless steel.
- High torsional rigidity.
- Maintenance and wear free.
- Version with double disc pack and spacer made to length.
- High torque possible.

ON REQUEST

- Use in applications with high operation temperatures ($> 150^{\circ}\text{C}$) possible.
- Specific treatments or version in full stainless steel possible.
- Customized versions for specific needs.
- Connection to ComInTec TORQUE LIMITERS range possible.

Designed to suit applications where high reliability, precision and an optimum weight/power ratio is required; ideally suited for applications with high speeds and power, also offering low overhung loads when using spacer version.

This coupling is composed of three main items: the two fully turned hubs, made in steel UNI EN10083/98 and the disc pack, in stainless steel AISI 304 C with connection screws in steel class 10.9. In the "double" version, GTR/D, there is also a spacer made to length, also built in steel UNI EN10083/98, fixed between the hubs and the two disc packs.

All the components of GTR couplings, except the spacer, are made and balanced into class DIN ISO 1940-1:2003 Q 6.3, before the machining of the keyway.

In accordance to the specific need of the application, it is possible to make static or dynamic balancing on each separate component or on the coupling, fully assembled to customer requirements.

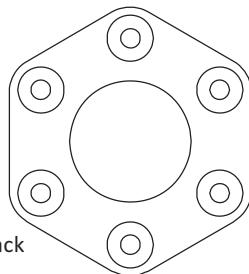

■ DESCRIPTION OF DISCS

The fundamental elements of this torsionally rigid coupling are the disc packs, built from a series of stainless steel discs type AISI 304-C, connected by steel bushes. This disc pack is connected in an alternate way to the hub flange or the eventual spacer, by using screws in steel class 10.9 and the relevant self-locking nuts.

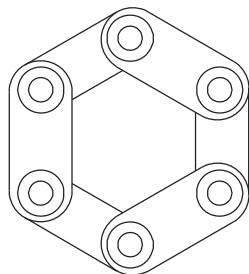

With reference to the configuration, the disc packs can be:

- Unique discs with continuous ring (coupling sizes 1-7)
- Disc sections (coupling sizes 8-12)

Continuous ring disc pack
(sizes 1-7)

Sectional disc pack
(sizes 8-12)

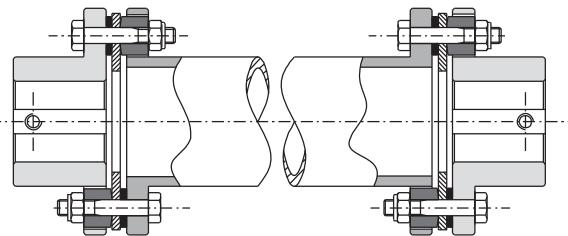

Assembly example with internal and external locking bushes

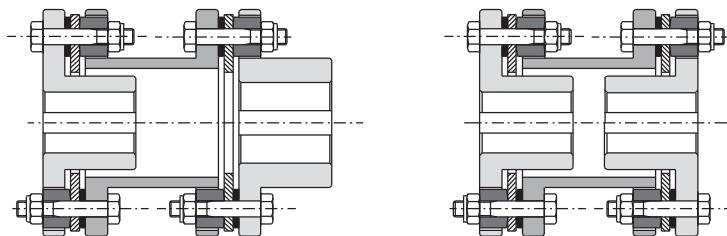

GTR – torsionally rigid coupling: introduction

MANUFACTURING

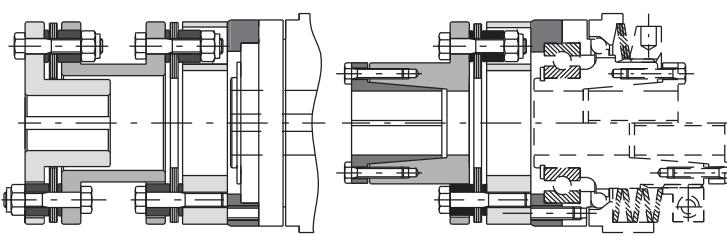

Version with spacer supplied, made to length, according to the application needs.

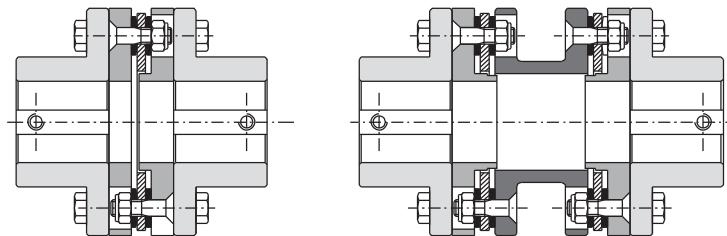

Manufacturing with internal hubs in order to reduce the axial dimensions.

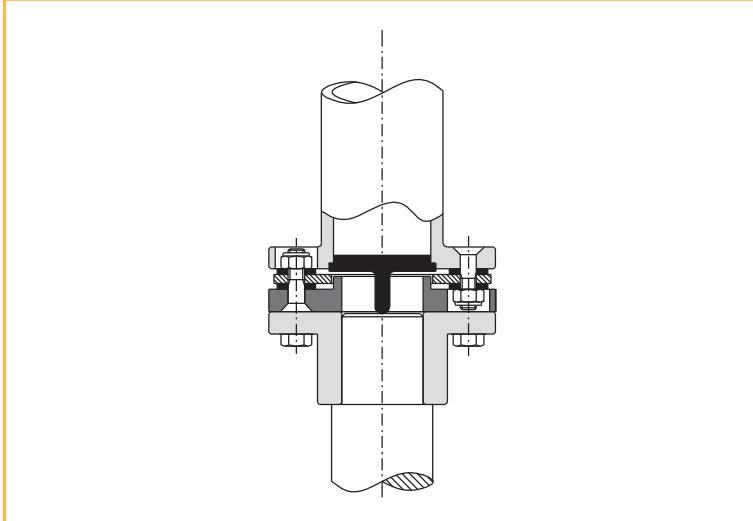

Manufacturing in addition to the /SG torque limiters range, with simple and/or double disc pack.

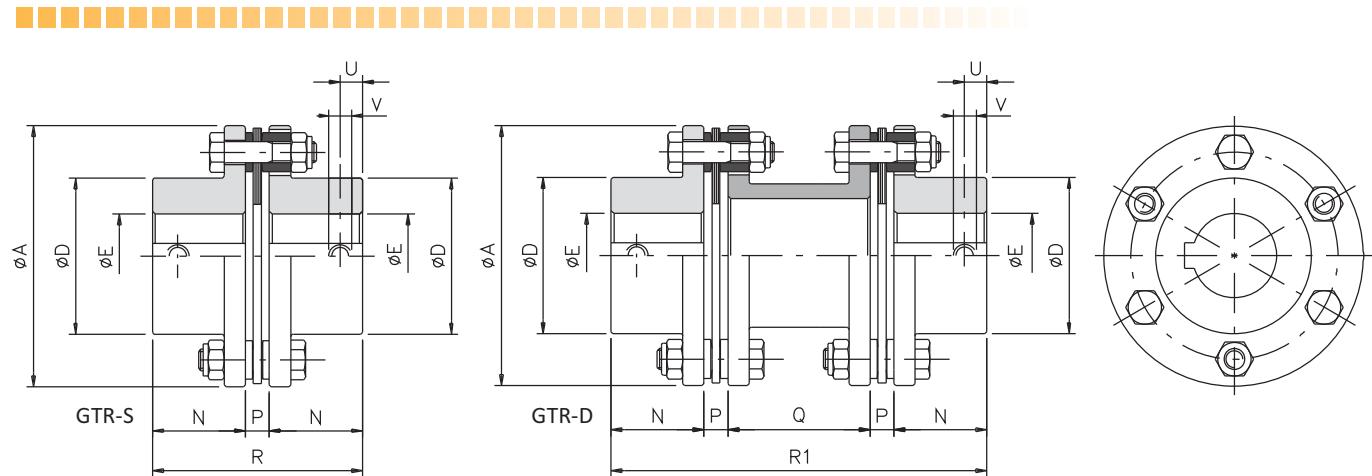

Solution with adaptors both in simple and double version, for easy substitution of disc packs without moving the hubs (in accordance with directive API610).

Solution for vertical mounting, where the spacer has to be supported to avoid the weight pre-loading the disc pack.

NOTES ■

- ⊗ **Code:** the 7th, 8th, 9th digits of the code indicate the finished bore diameter of a half-hub in mm (000 = Pilot Bore).
- ⊗ **Code:** the 10th, 11th, 12th digits of the code indicate the finished bore diameter of the second half-hub in mm (000 = Pilot Bore).
- ⊗ **Q std (*):** different dimensions available on request.
- ⊗ **Technical characteristics:** the weights refer to the coupling with pilot bore; inertias refer to the coupling with maximum bore.
